

Clickable UI walkthrough across 10 hazard classes (MVP: PPE + exclusion zone; others planned): camera detection → Security Desk alarm → human review → acknowledged + incident entry → optional Procore Safety Observation → hazard-class analytics → site risk heat map.

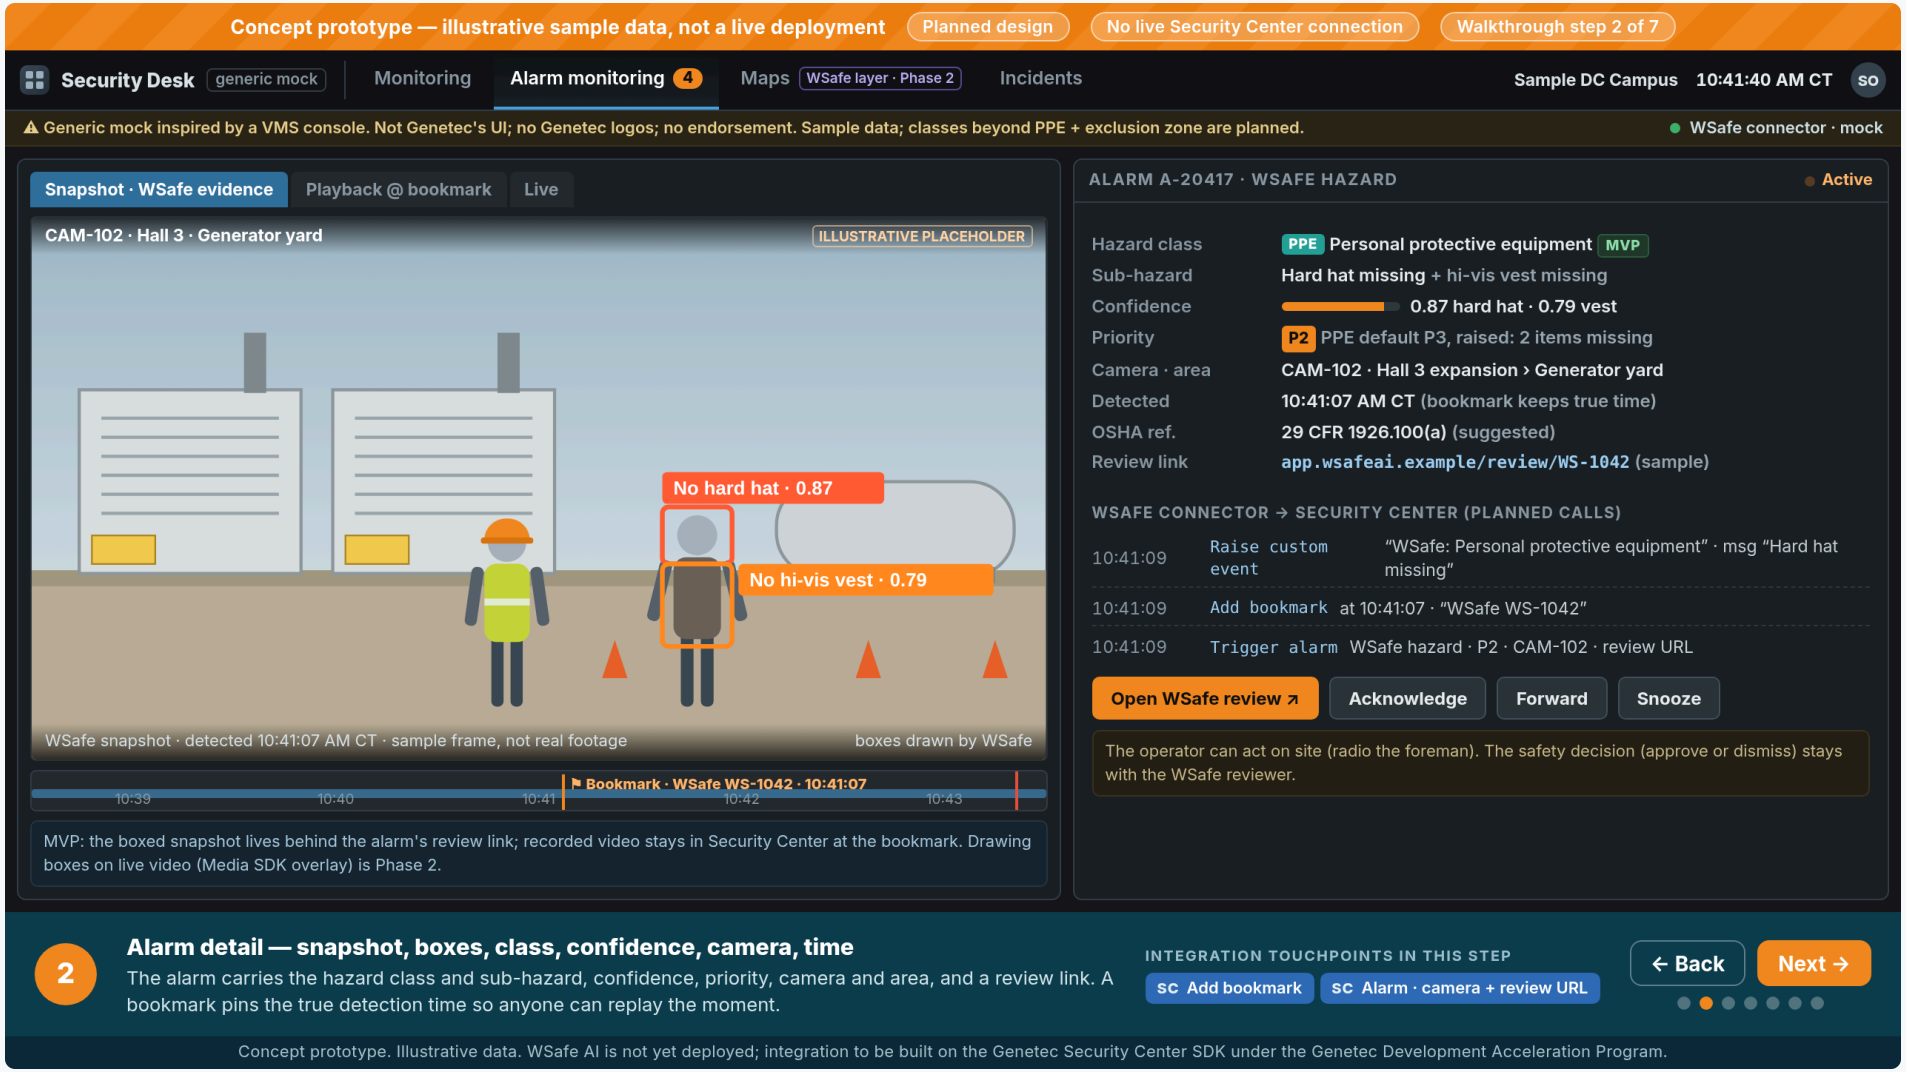

WSafe alarms from several hazard classes (falls, struck-by, electrical, PPE, housekeeping) sit in the operator's normal alarm list; a new PPE alarm arrives.

Integration touchpoints: SC RTSP in · SC Raise custom event (per class) · SC Trigger alarm

Screen 2 of 7 · Alarm detail — snapshot, boxes, class, confidence, camera, time

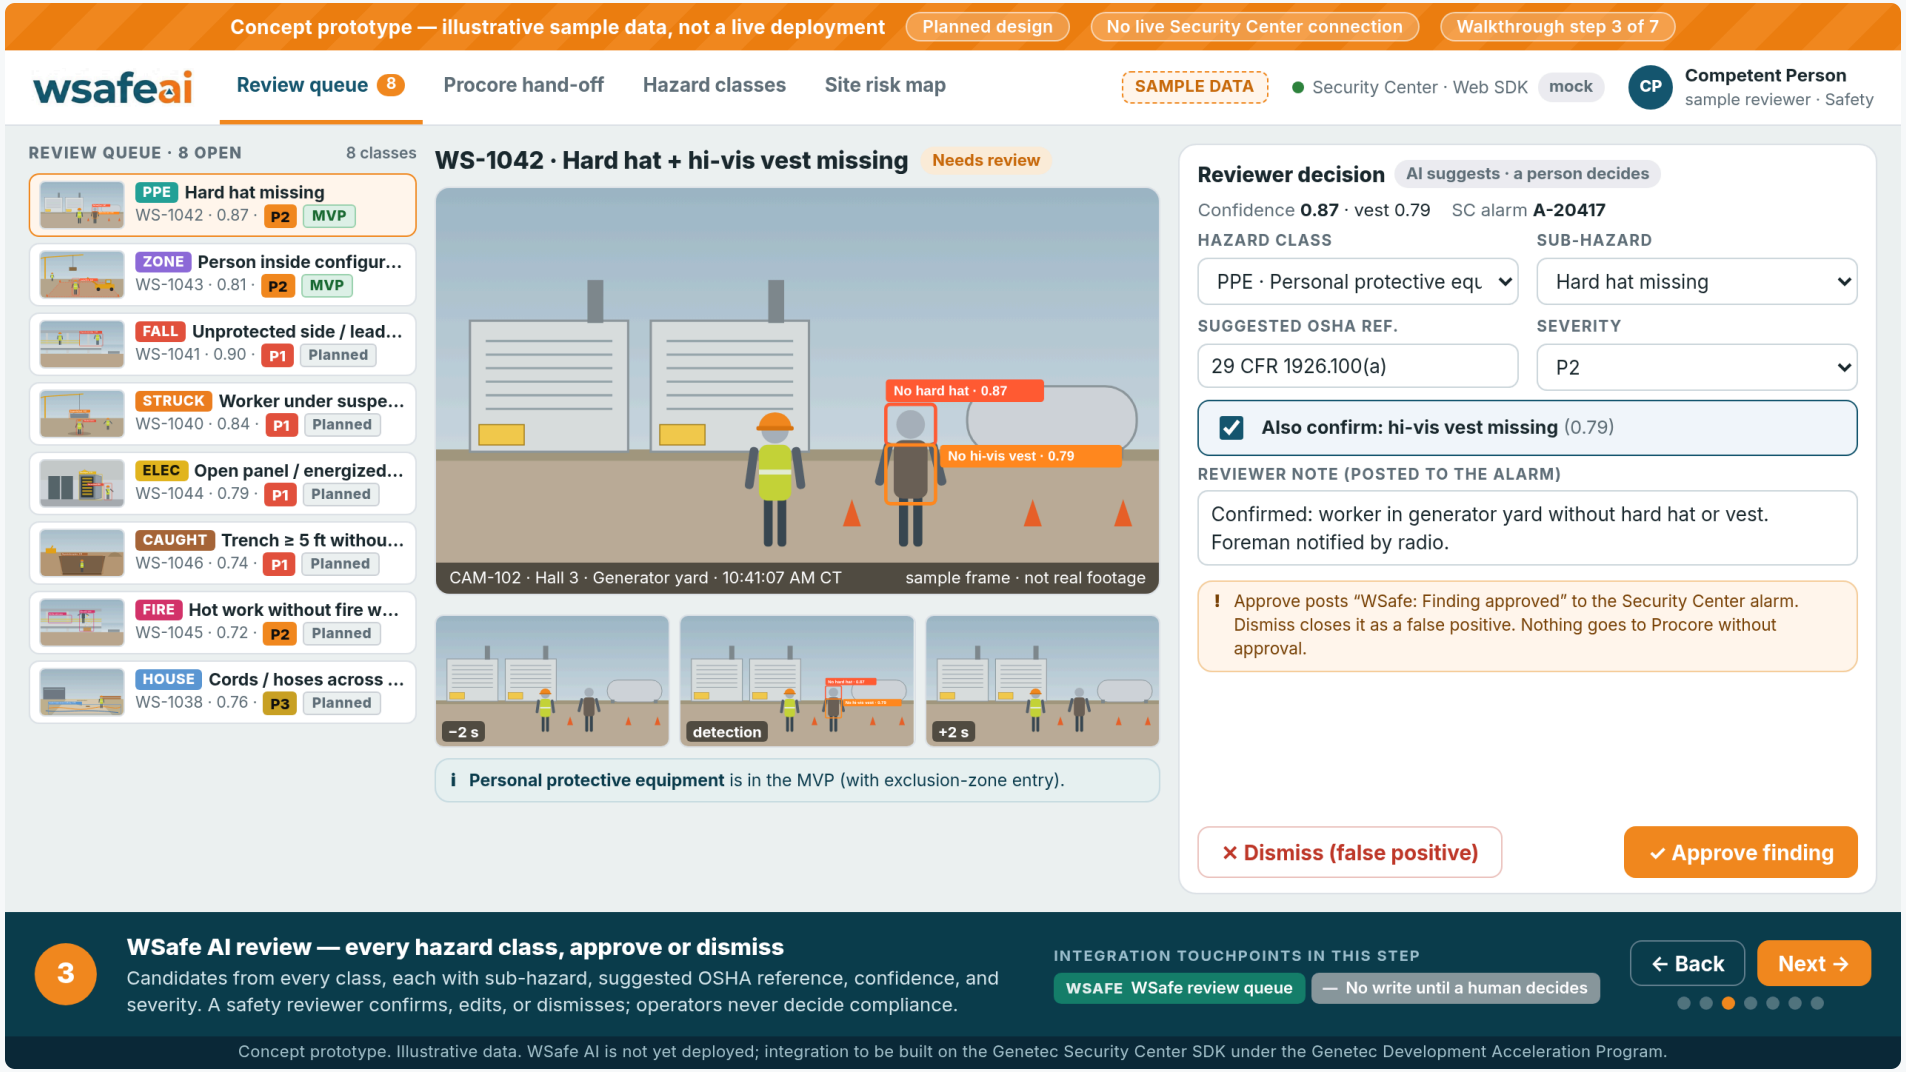

CONCEPT PROTOTYPE · ILLUSTRATIVE DATA

The alarm shows the snapshot with bounding boxes, hazard class and sub-hazard, confidence, priority, camera/area, and the true detection time.

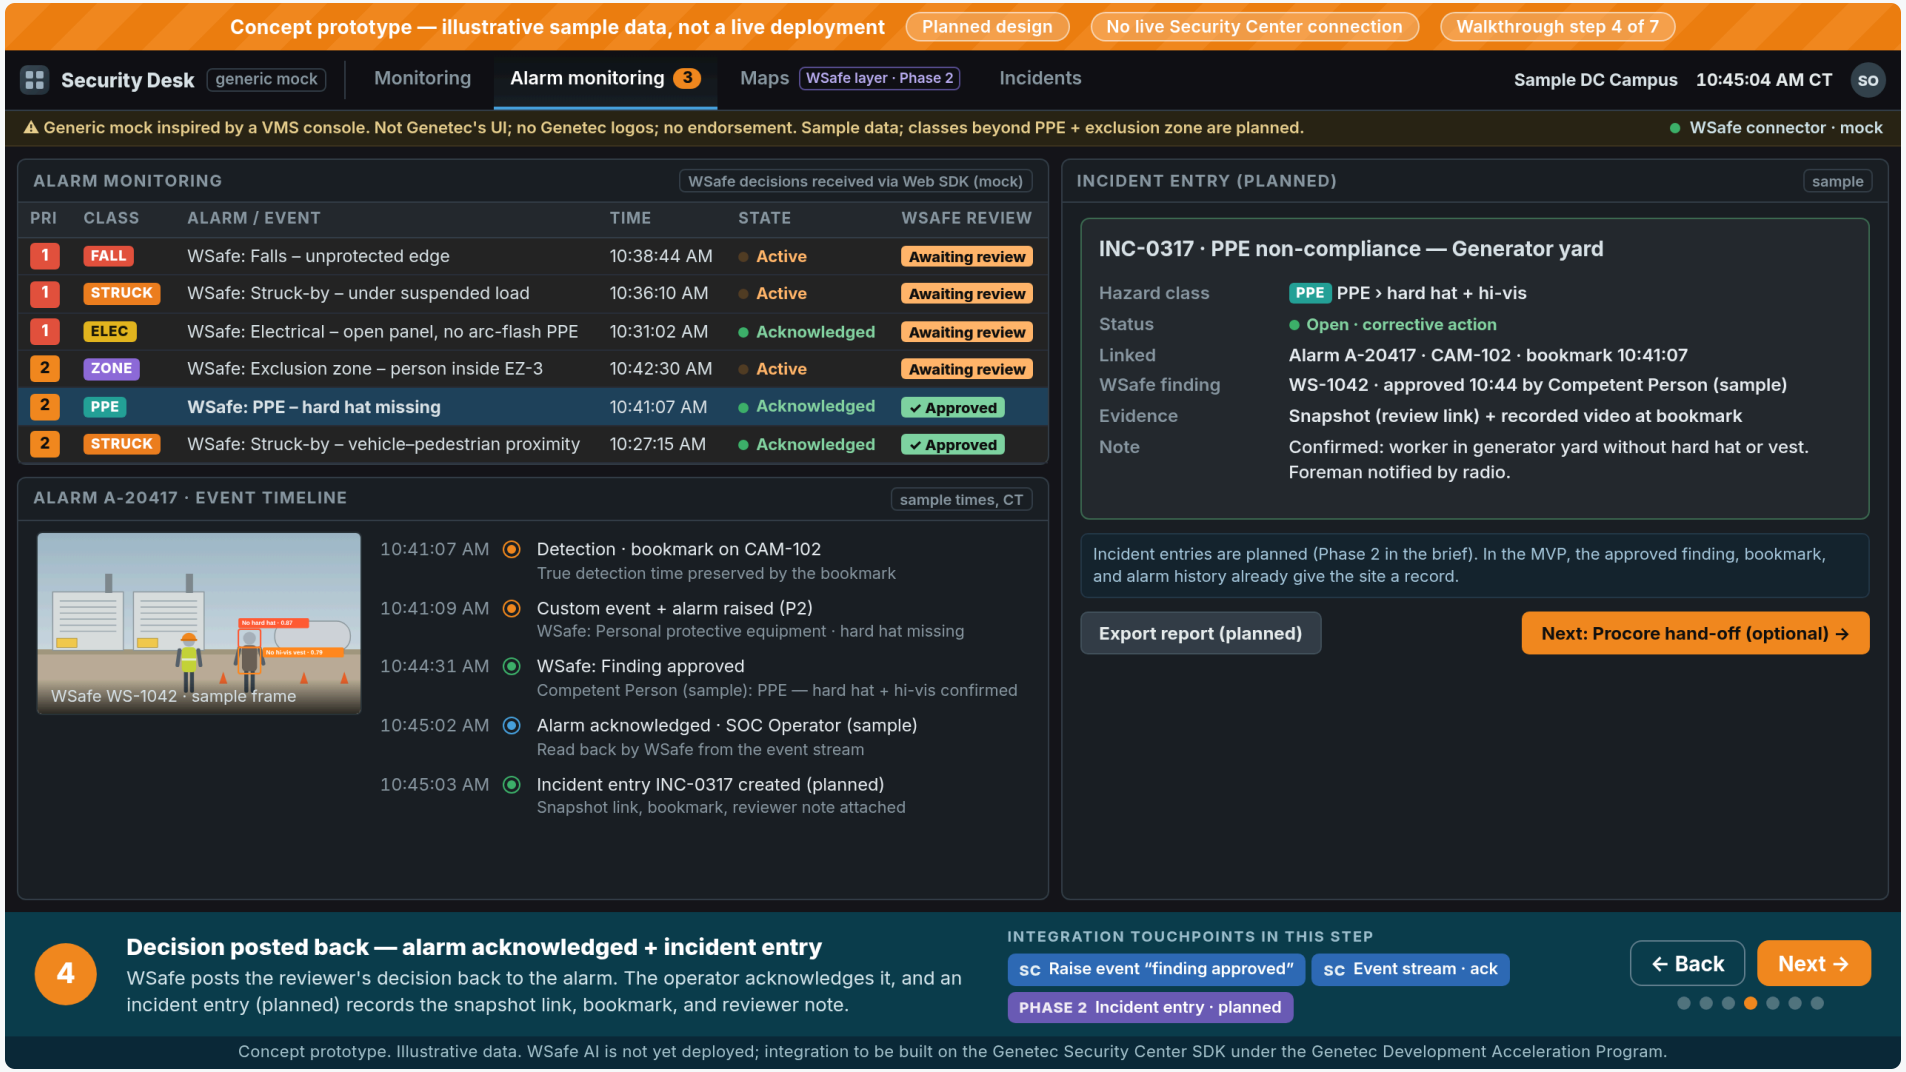

Integration touchpoints: SC Add bookmark · SC Alarm · camera + review URL

Concept prototype. Illustrative data. WSafe AI is not yet deployed; integration to be built on the Genetec Security Center SDK under the Genetec Development Acceleration Program.

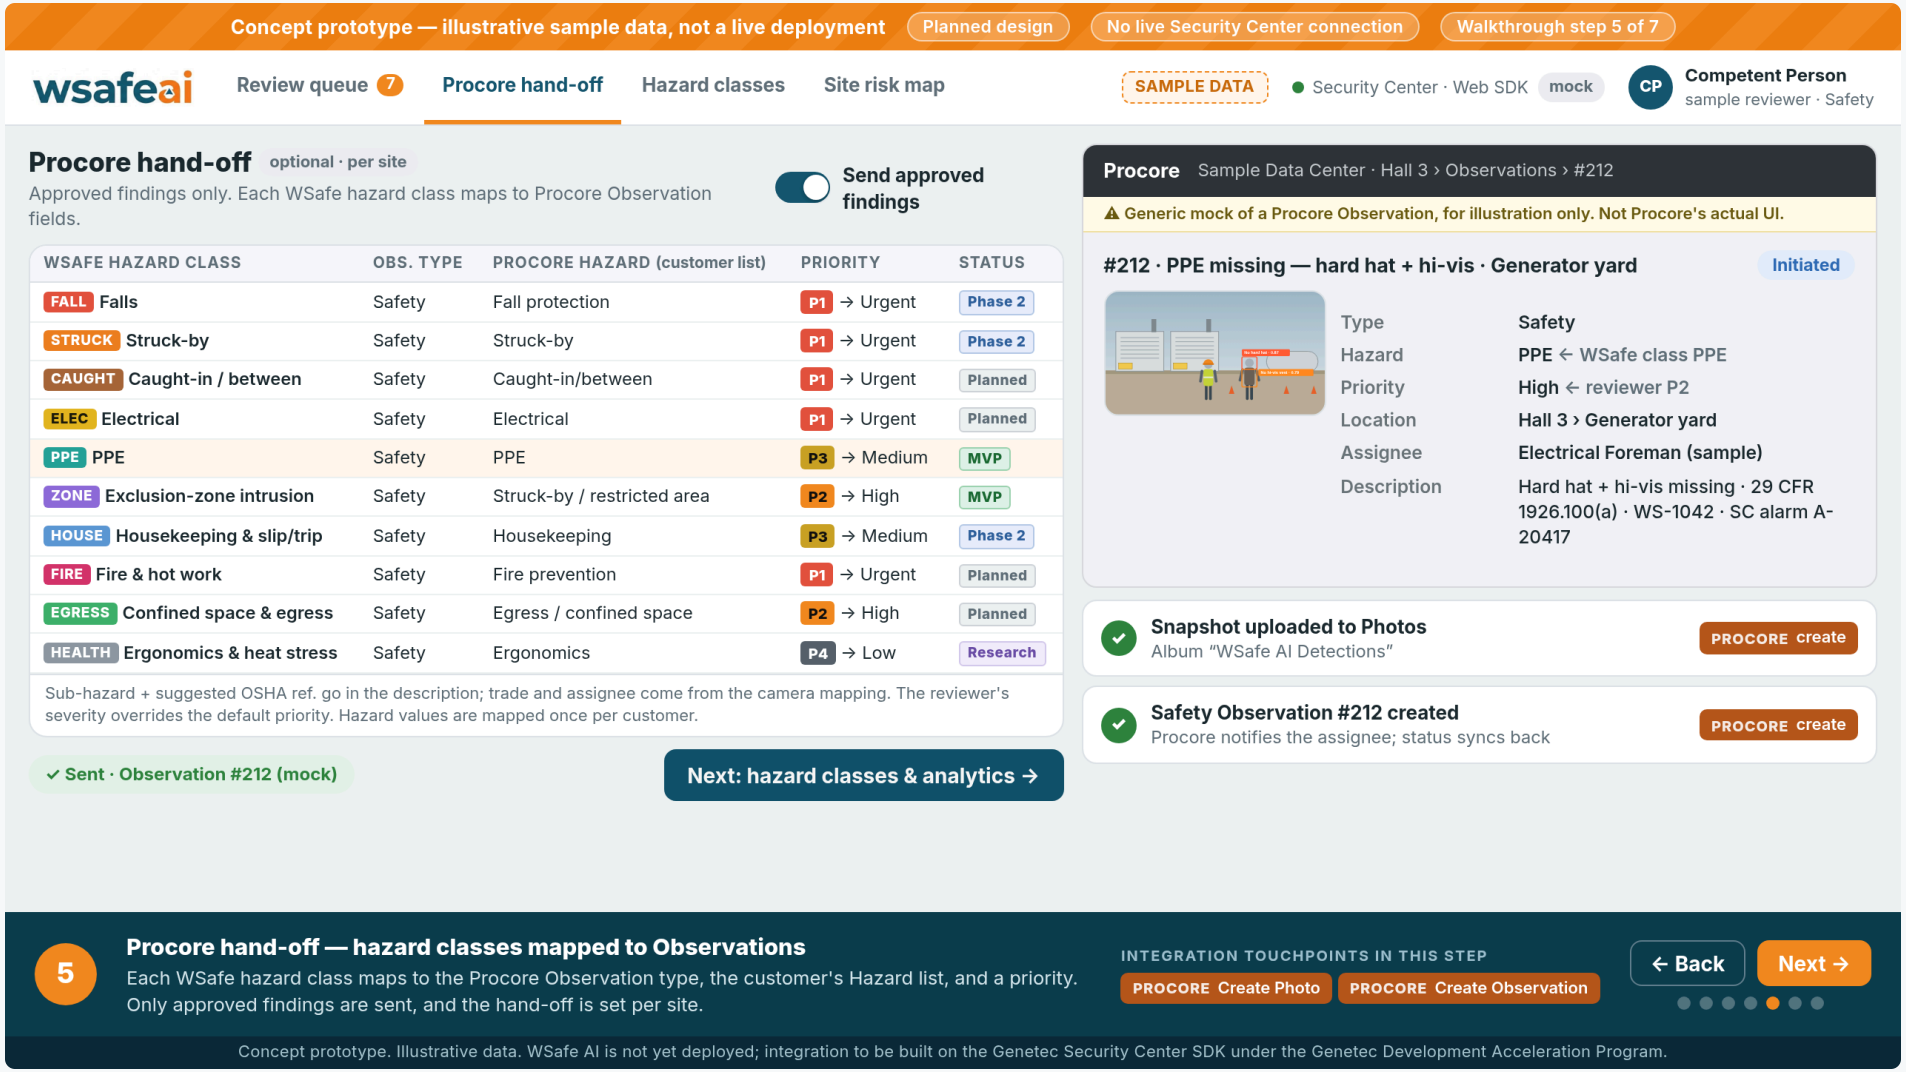

Human in the loop: a safety reviewer approves or dismisses candidates from every hazard class, each with sub-hazard, OSHA reference, confidence, and severity.

Integration touchpoints: WSAFE WSafe review queue — No write until a human decides

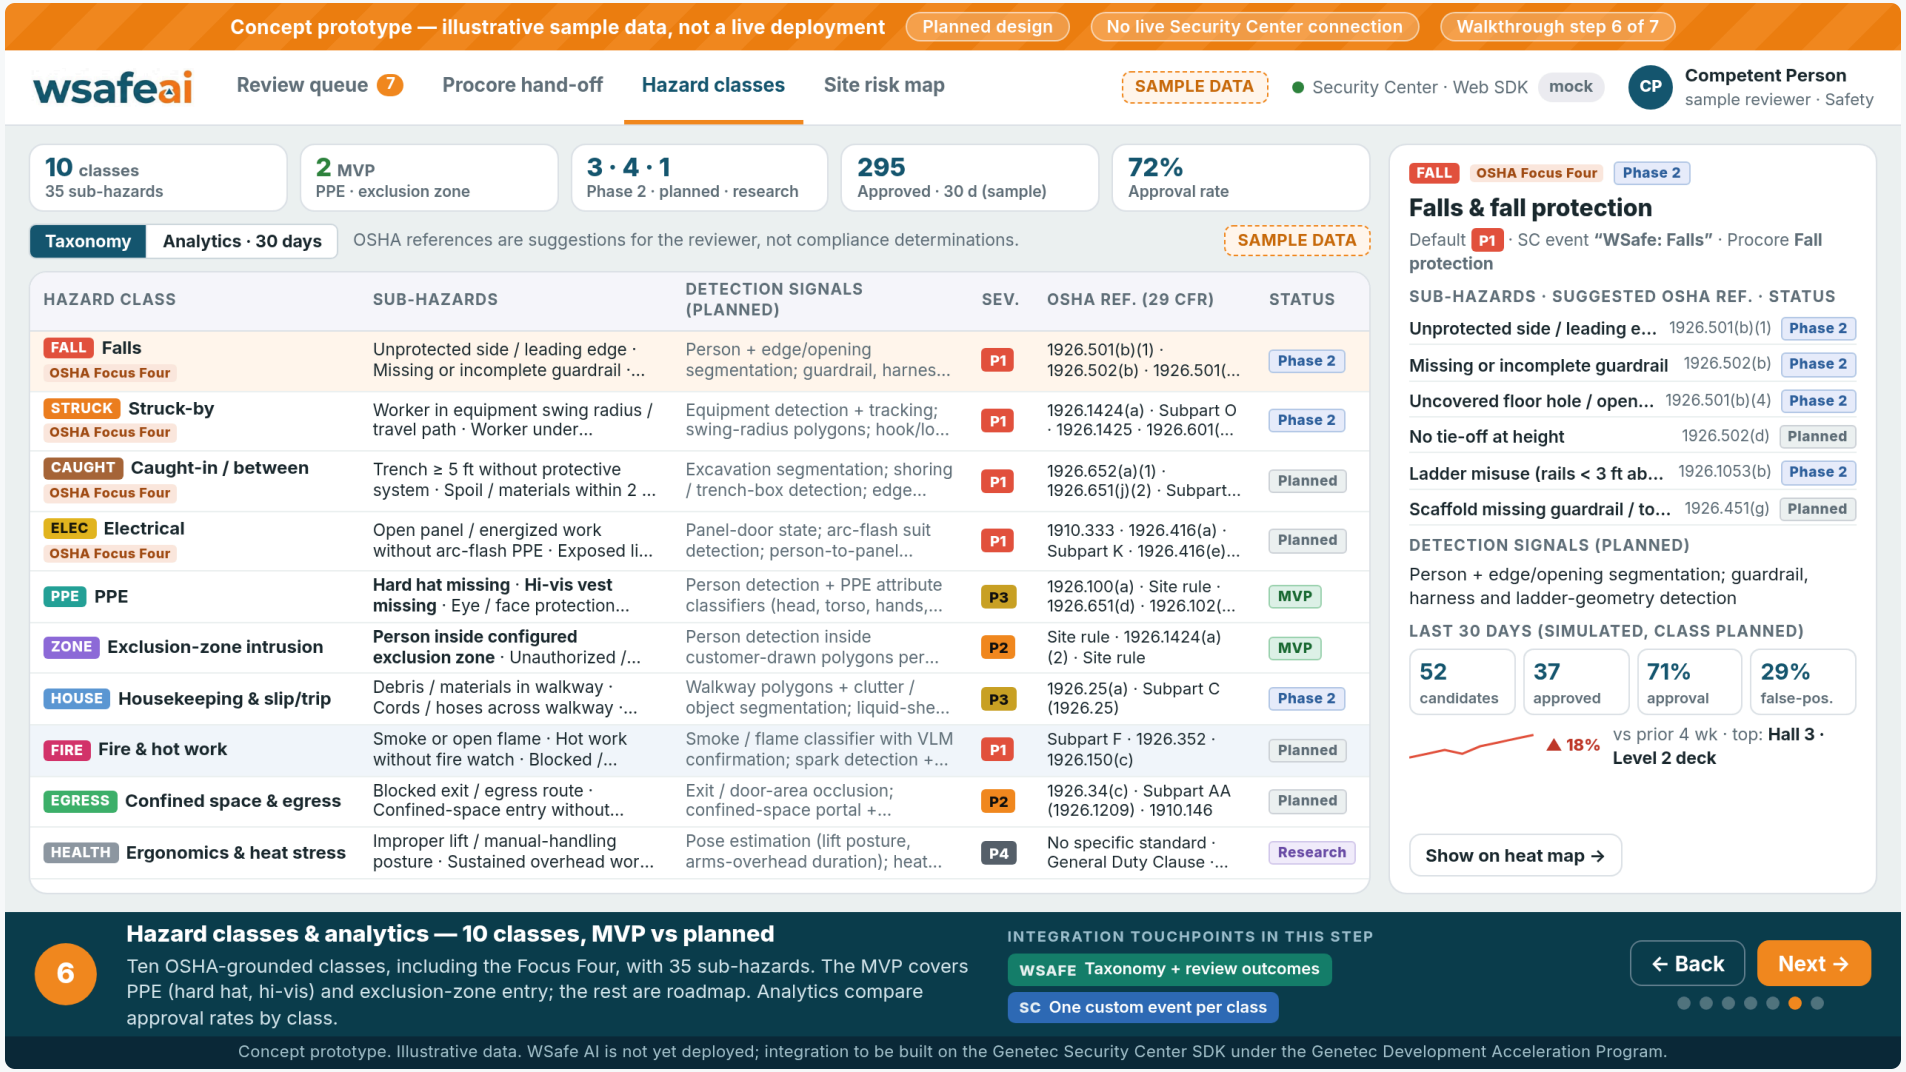

WSafe posts the decision to the alarm; the operator acknowledges and an incident entry records the evidence.

Integration touchpoints: SC Raise event "finding approved" · SC Event stream · ack · PHASE 2 Incident entry · planned

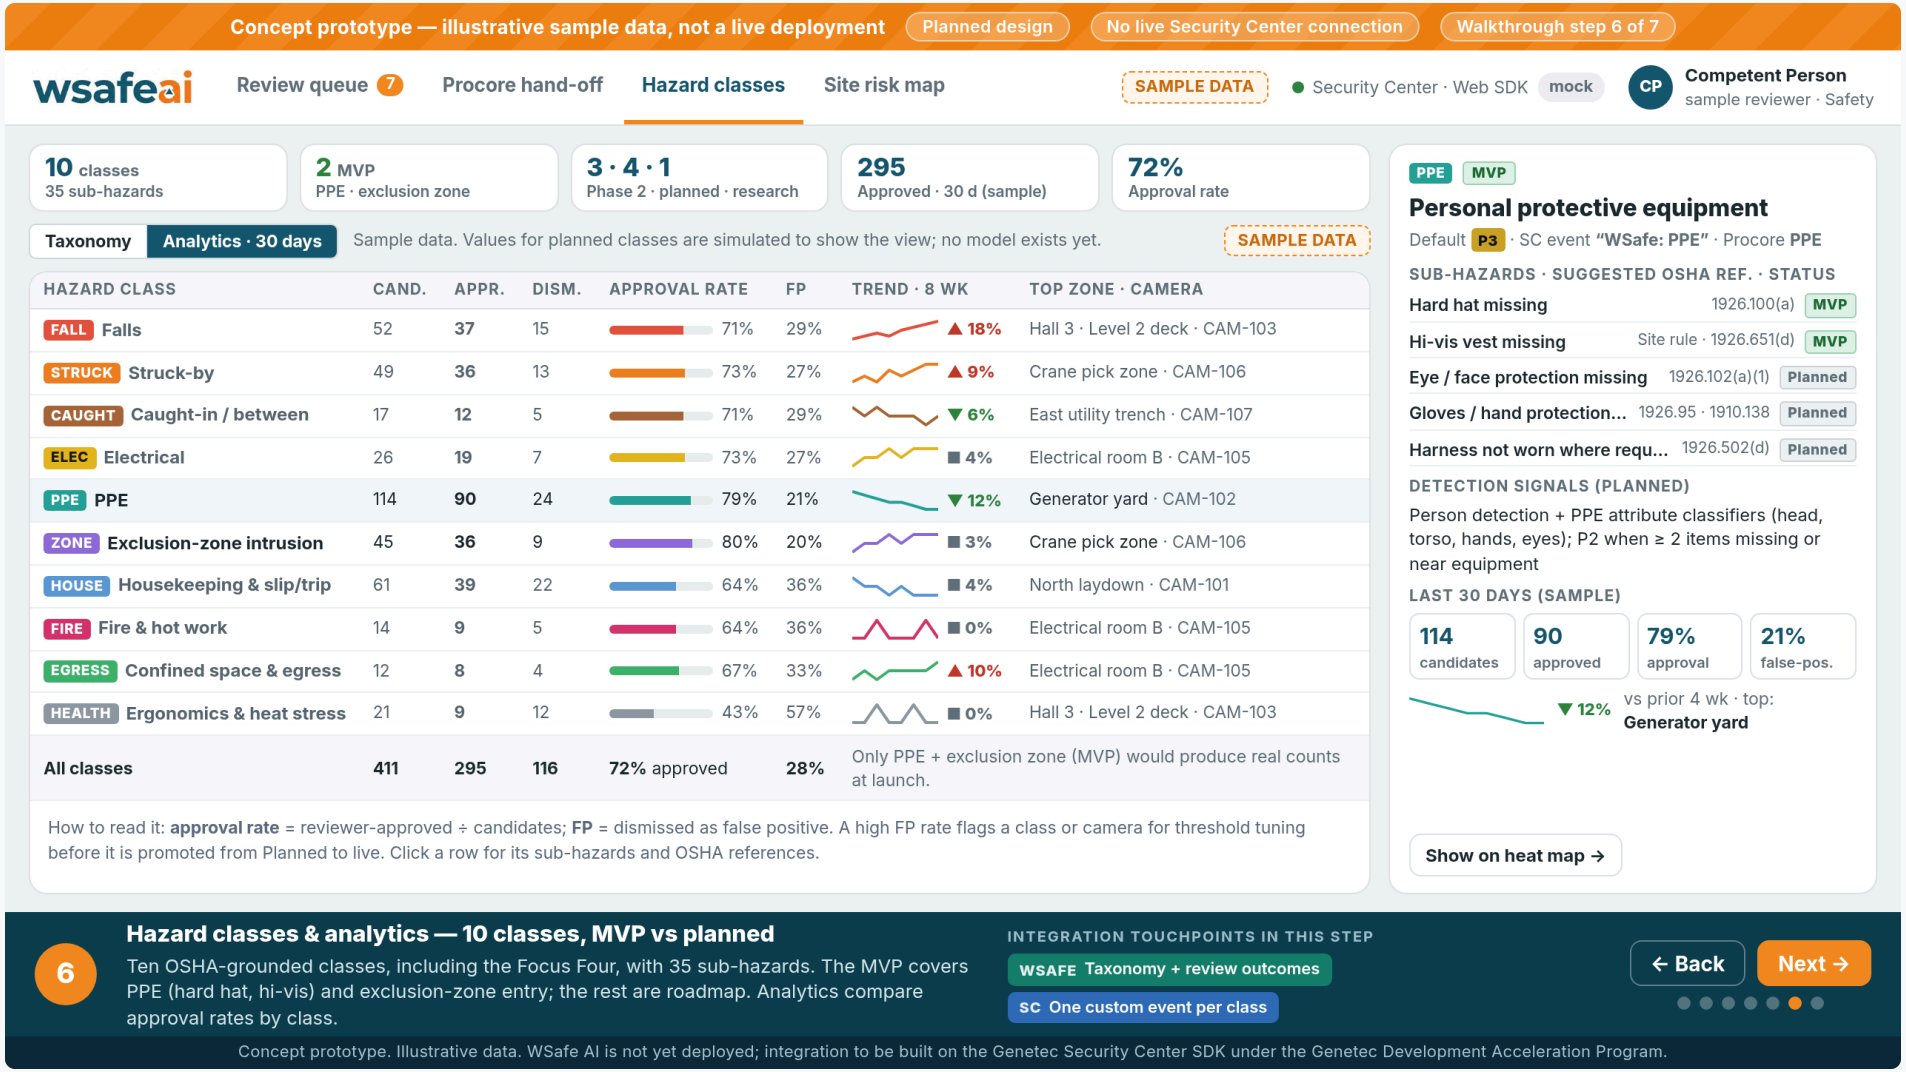

Each hazard class maps to the Procore Observation type, hazard, and priority; approved findings can become Safety Observations.

Integration touchpoints: PROCORE Create Photo · PROCORE Create Observation

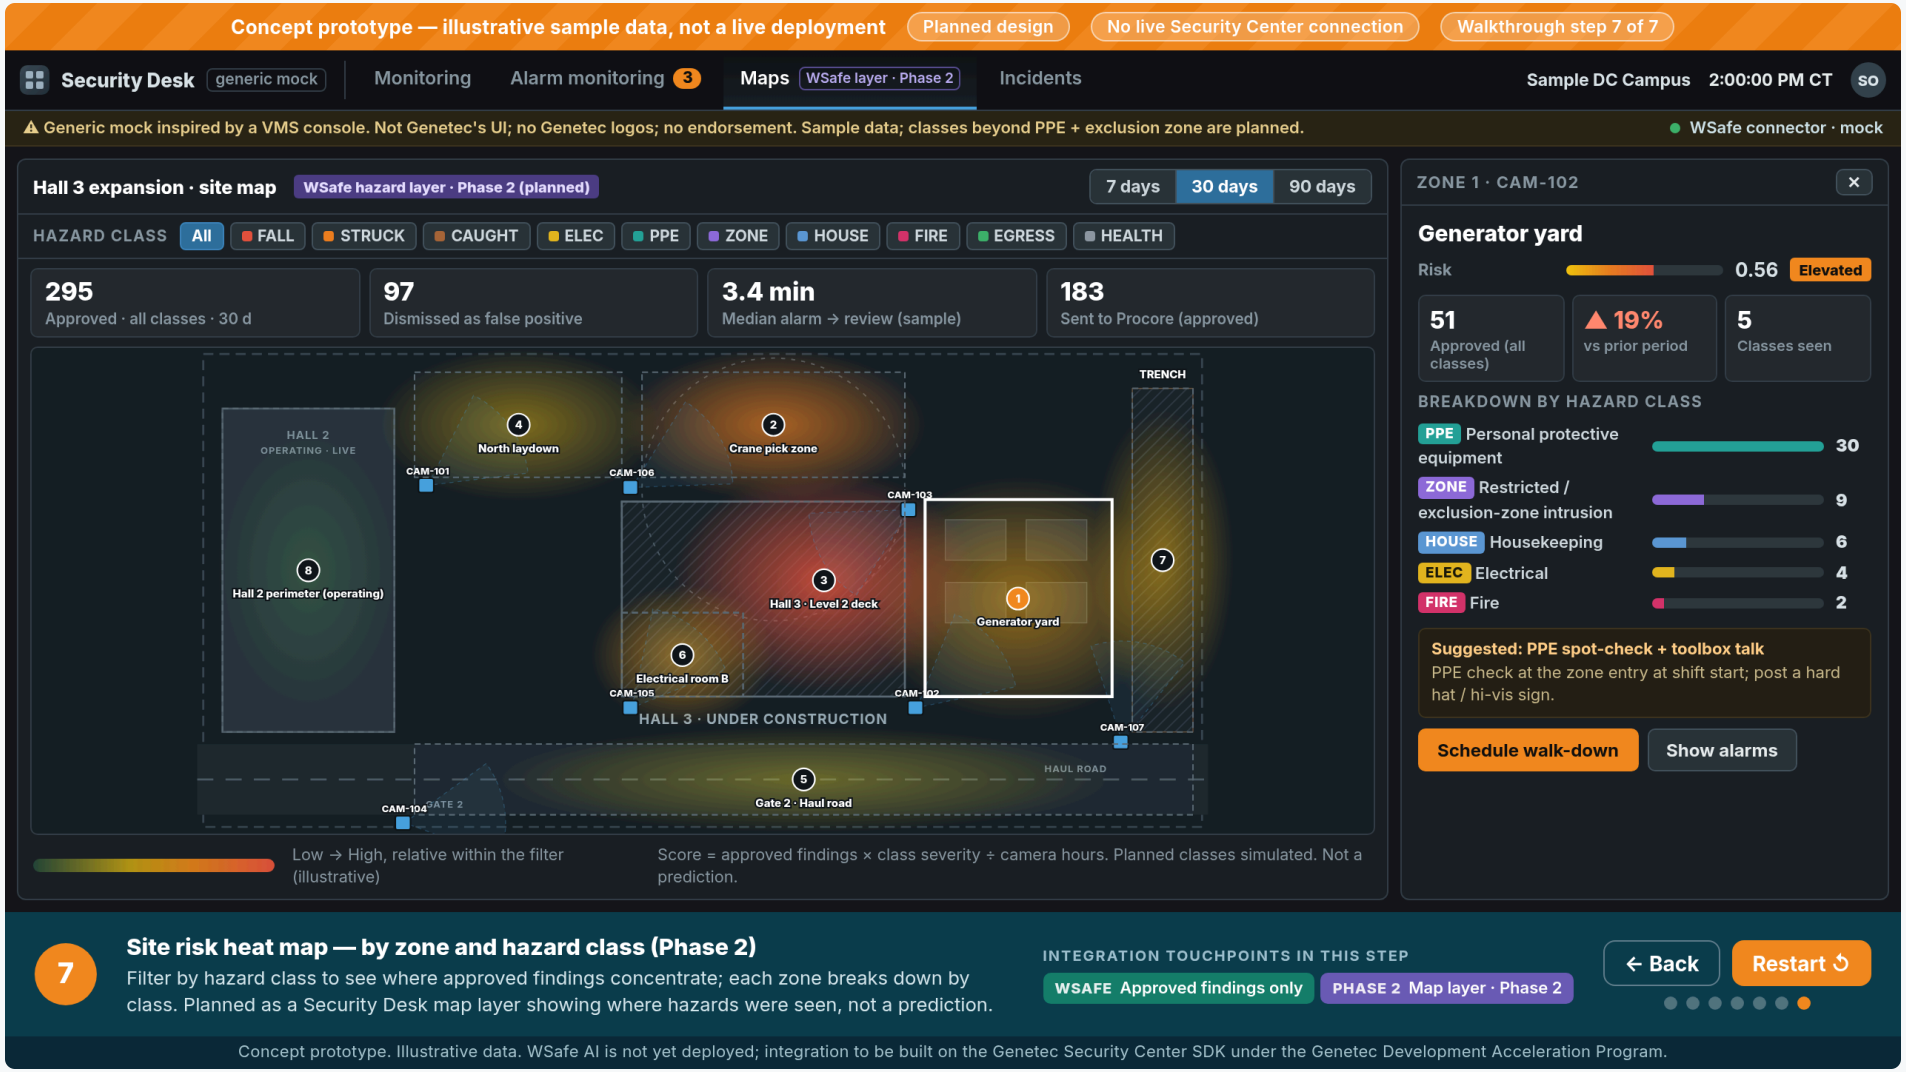

The taxonomy: 10 hazard classes and 35 sub-hazards with detection signals, default severity, OSHA reference, and MVP vs planned status, plus per-class analytics.

Integration touchpoints: WSAFE Taxonomy + review outcomes · SC One custom event per class

Per-class analytics (sample, simulated for planned classes): candidates, approved, dismissed, approval and false-positive rates, 8-week trend, and top zone/camera; PPE detail on the right.

Integration touchpoints: WSAFE Taxonomy + review outcomes · SC One custom event per class

Approved findings roll up by zone and hazard class into a relative risk map for targeting walk-downs and toolbox talks.

Integration touchpoints: WSAFE Approved findings only · PHASE 2 Map layer · Phase 2
