

Clickable UI walkthrough: camera hazard detection (missing PPE, exclusion-zone entry) → Security Desk alarm → human review → acknowledged + incident entry → optional Procore Safety Observation → site risk heat map.

Screen 1 of 6 · Security Desk monitoring — a WSafe AI hazard alarm arrives

CONCEPT PROTOTYPE · ILLUSTRATIVE DATA

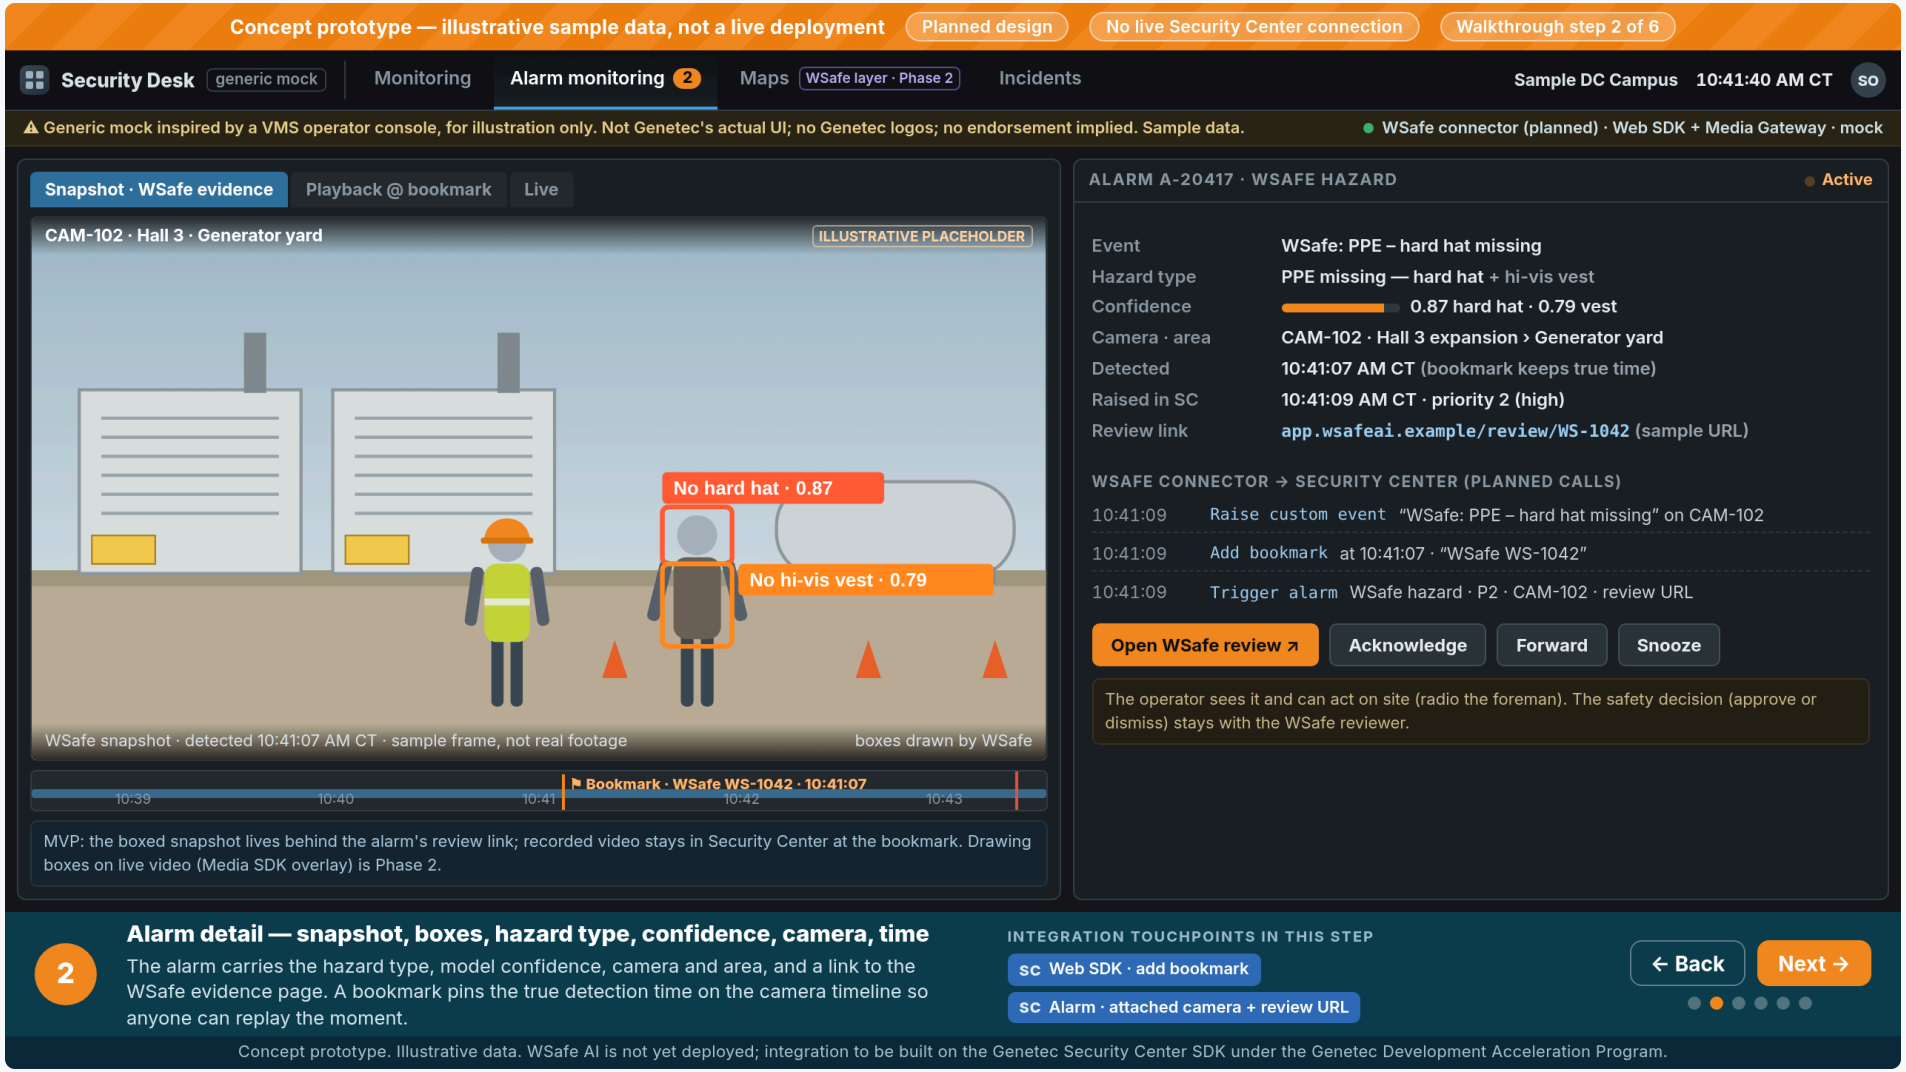

A WSafe AI PPE alarm lands in the operator's normal alarm list and the camera tile highlights.

Integration touchpoints: SC Media Gateway · RTSP in · SC Web SDK · raise custom event · SC Web SDK · trigger alarm

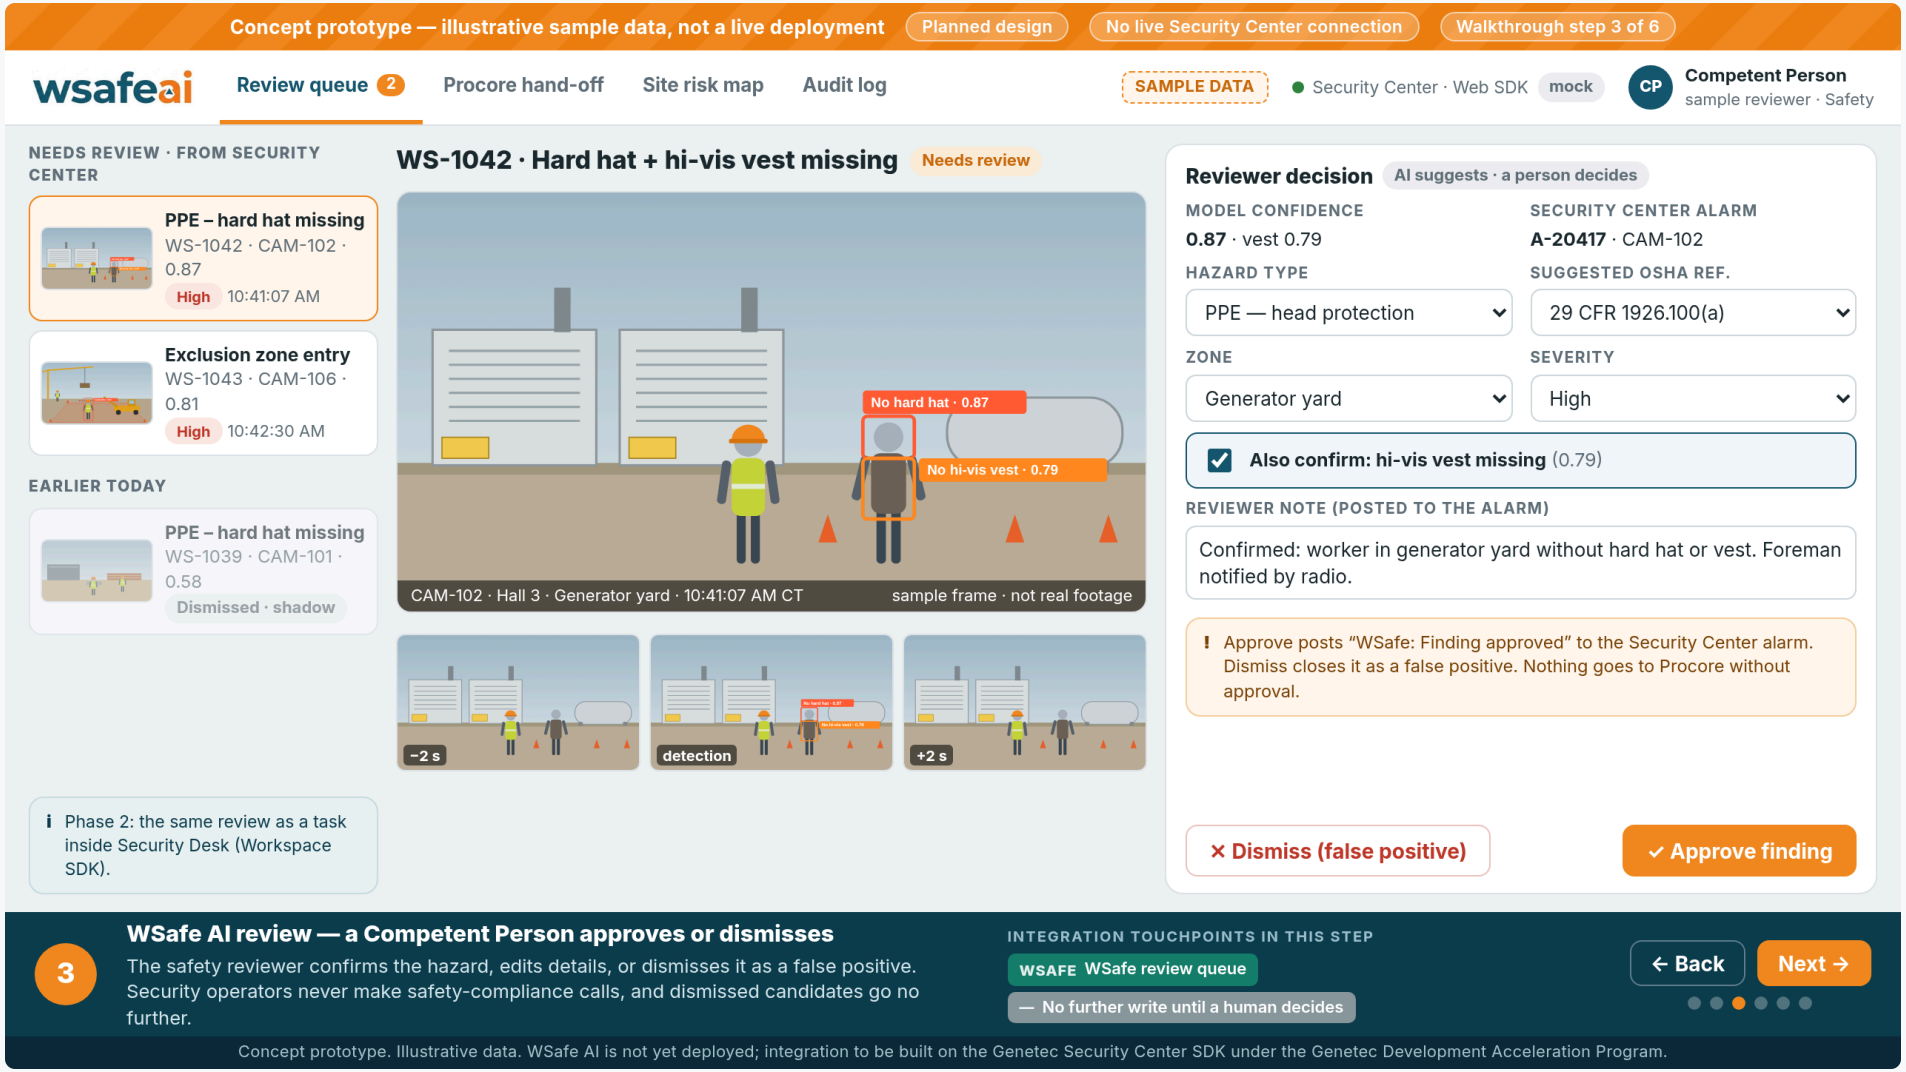

Screen 2 of 6 · Alarm detail — snapshot, boxes, hazard type, confidence, camera, time

CONCEPT PROTOTYPE · ILLUSTRATIVE DATA

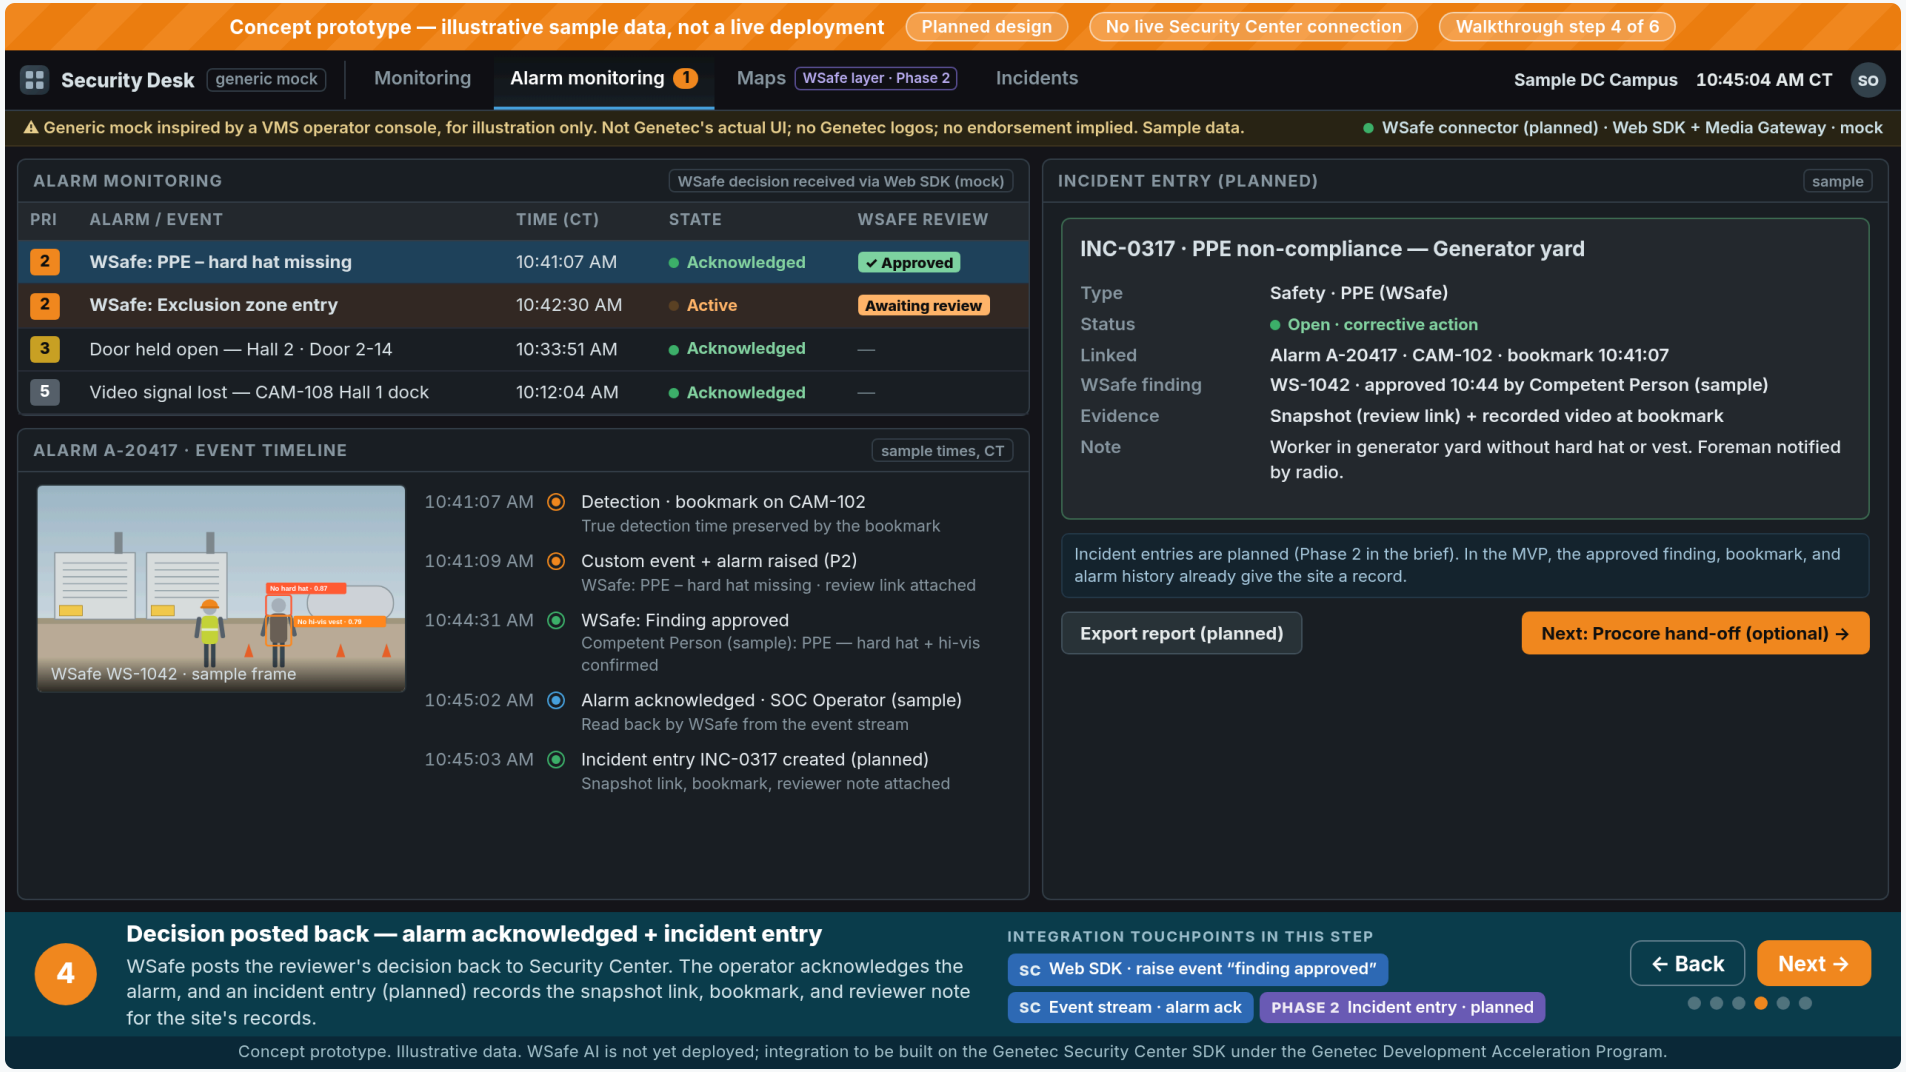

The alarm shows the snapshot with bounding boxes, hazard type, confidence, camera/area, and the true detection time.

Integration touchpoints: SC Web SDK · add bookmark | SC Alarm · attached camera + review URL

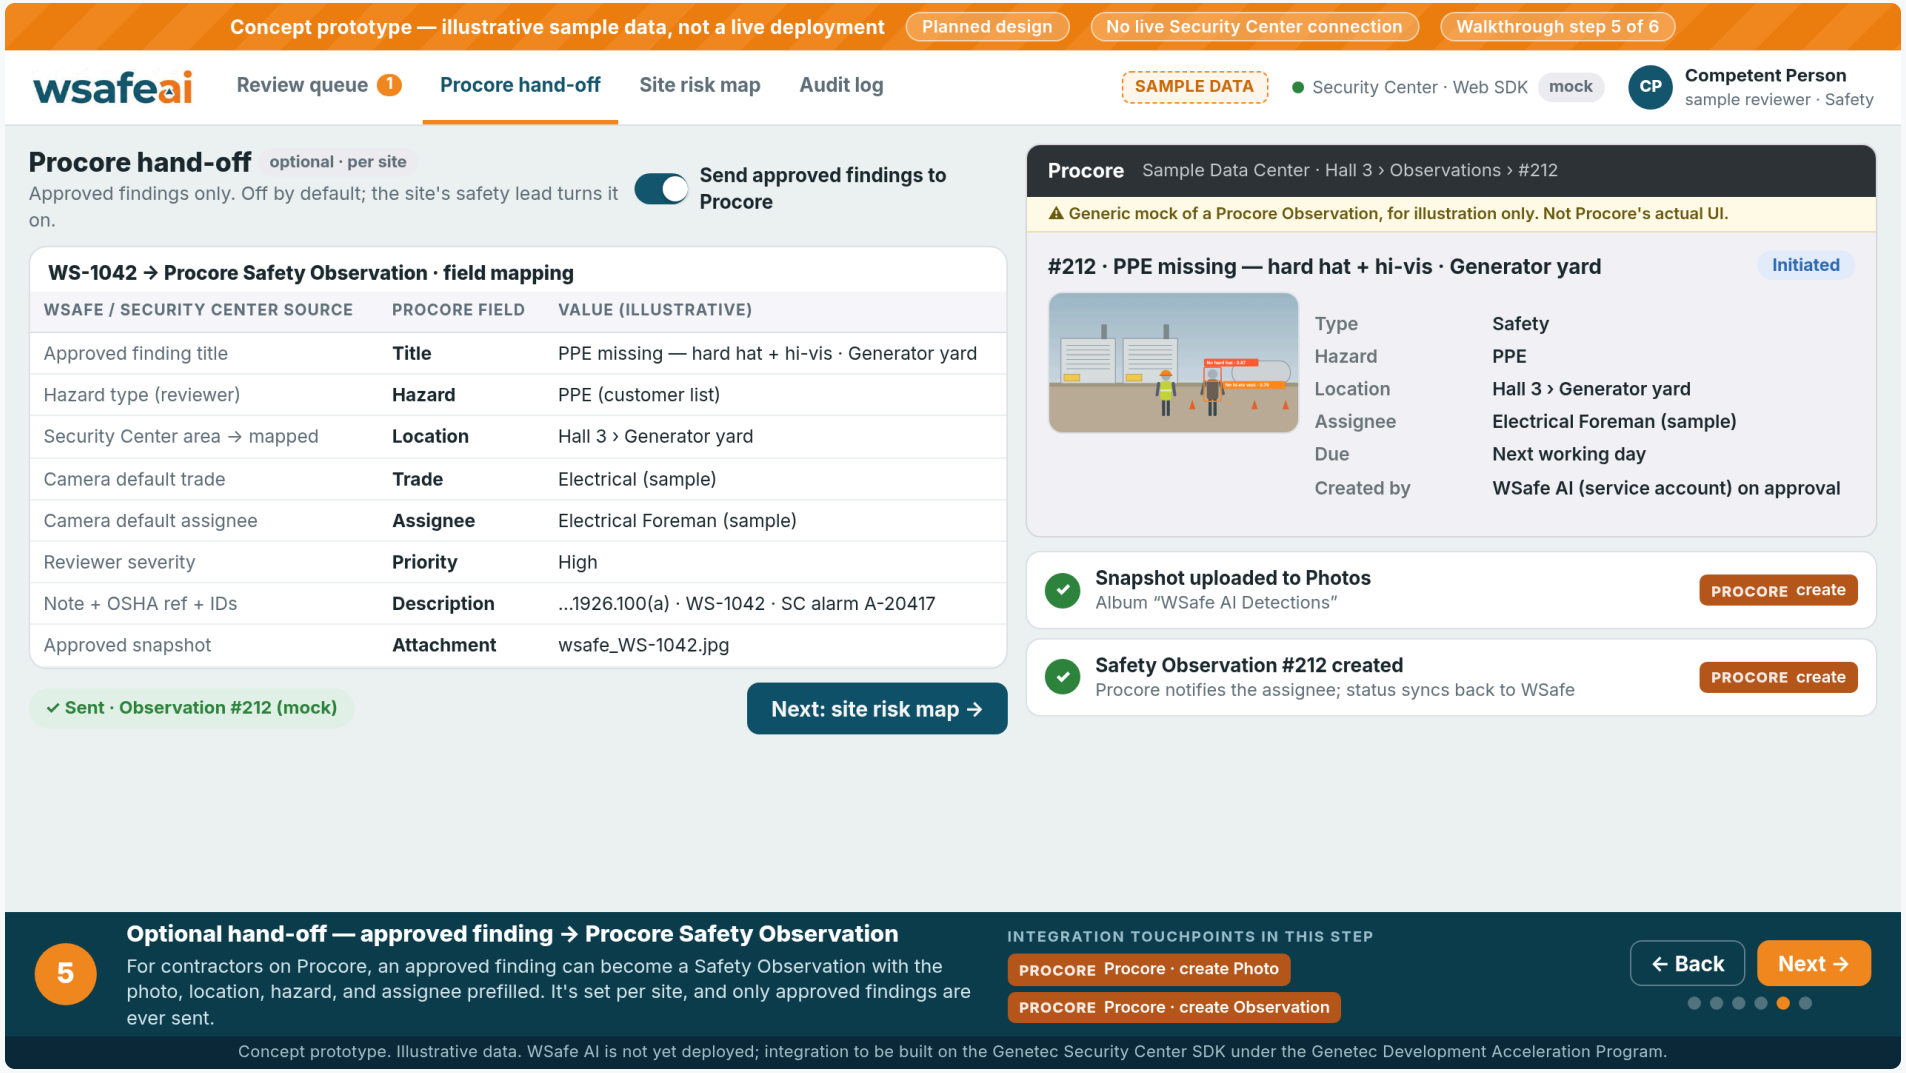

Human in the loop: a safety reviewer approves or dismisses each candidate before anything goes further.

Integration touchpoints: WSAFE WSafe review queue — No further write until a human decides

WSafe posts the decision to the alarm; the operator acknowledges and an incident entry records the evidence.

Integration touchpoints: SC Web SDK · raise event "finding approved" · SC Event stream · alarm ack · PHASE 2 Incident entry · planned

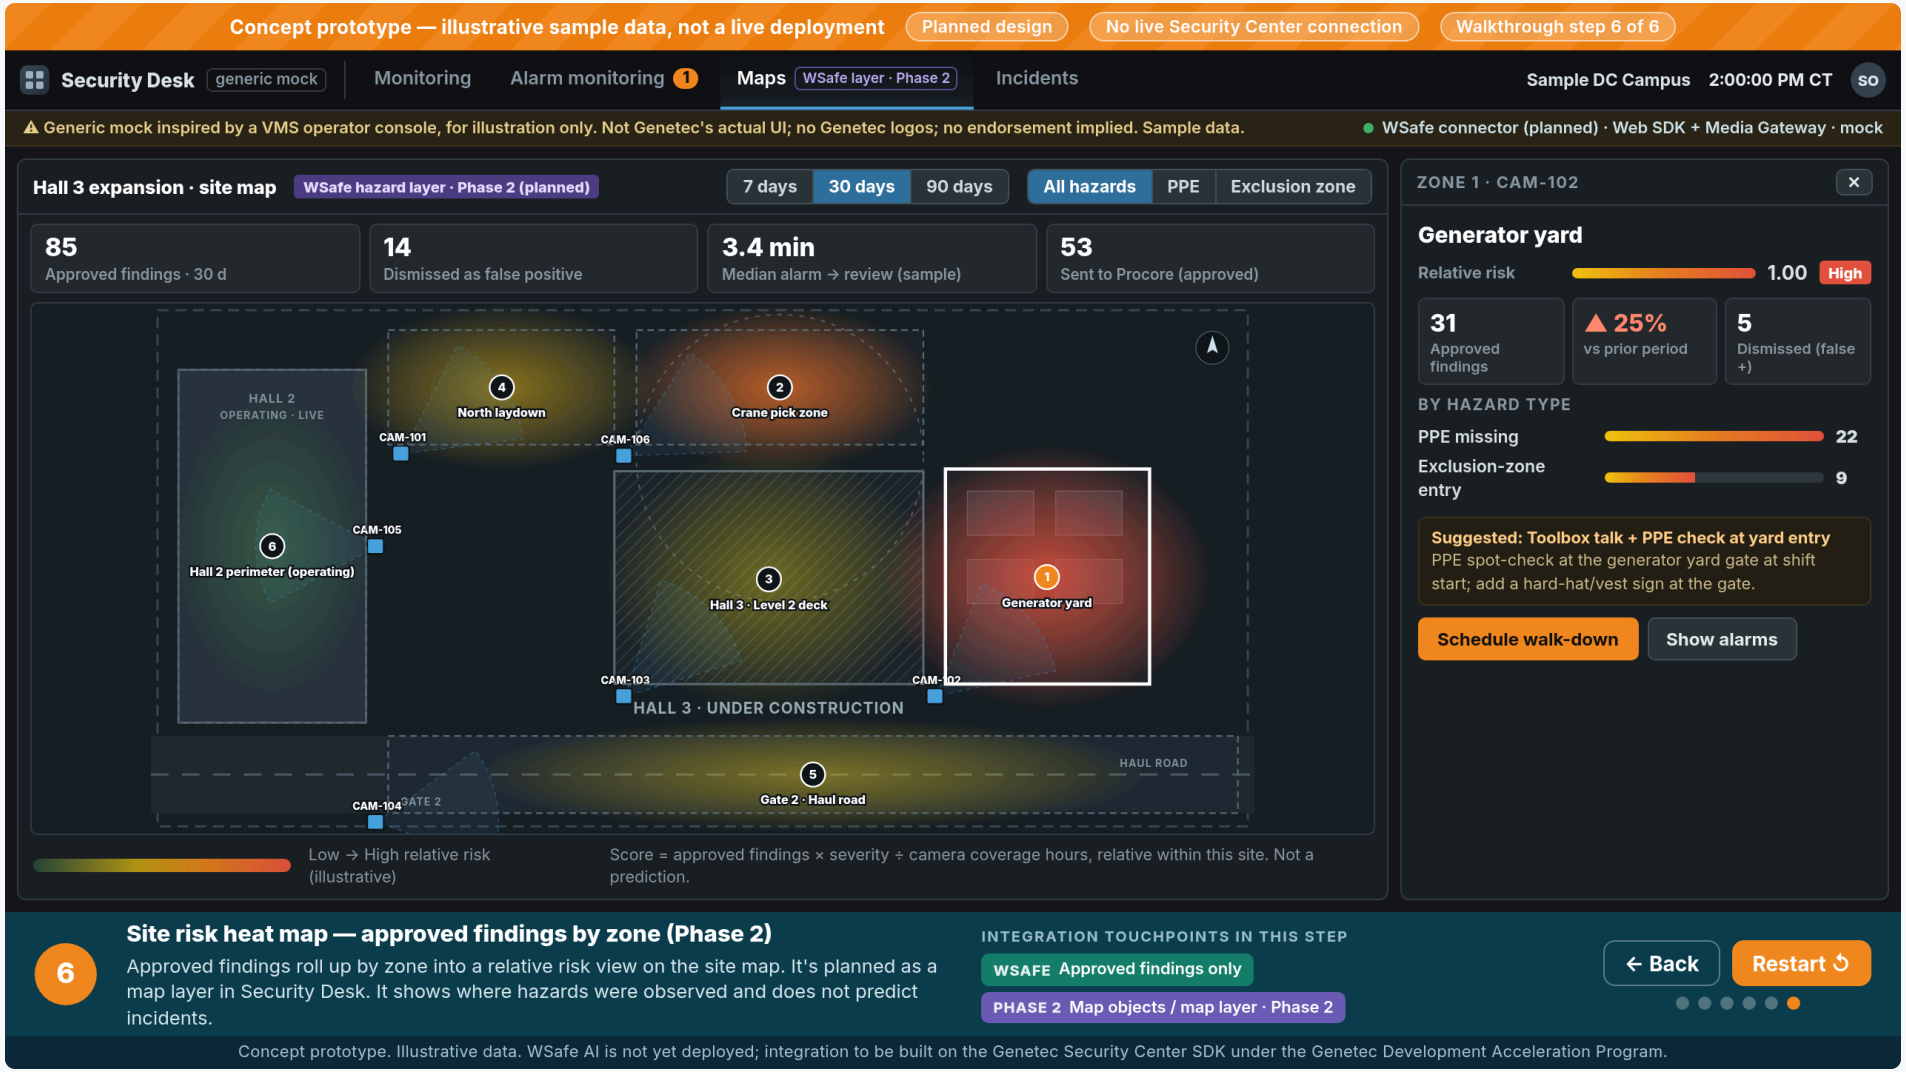

Optionally, the approved finding becomes a Procore Safety Observation with the photo and fields prefilled.

Integration touchpoints: PROCORE Procore · create Photo · PROCORE Procore · create Observation

Screen 6 of 6 · Site risk heat map — approved findings by zone (Phase 2)

CONCEPT PROTOTYPE · ILLUSTRATIVE DATA

Approved findings roll up by zone into a relative risk map for targeting walk-downs and toolbox talks.

Integration touchpoints: WSAFE Approved findings only · PHASE 2 Map objects / map layer · Phase 2
